Last Dental Treatment (when & what was done) _____

Intraoral Radiographs Taken? Yes No

Pre-anesthetic blood work required (minimum) within 1 year:

6 years and younger, blood work within the previous 6 months.

7 years and older, blood work within the previous 3 months. For pets age one to 4 years we require the following within the previous year: CBC with differential, chemistry panel, and electrolytes.

For pets age four to six years we require the following within the previous six months: CBC with differential, chemistry panel, and electrolytes.

For pets age seven years and older we require the following within the previous three months: CBC with differential, senior chemistry panel, electrolytes, T4 and SDMA.

For your convenience, or if not recently performed, we can do the blood work here the morning of the appointment.
